Metadata Quality Assurance

09.02.2026

Metode for metadata-kvalitetsvurdering

How data.europa.eu measures the quality of harvested metadata

The Metadata Quality Assessment (MQA) is a tool developed by the consortium of data.europa.eu to study the quality of metadata harvested by data.europa.eu. It is intended to help data providers and data portals to check their metadata quality and to receive suggestions for improvements. The results are presented via the MQA and are also available as download. In the following we describe the functionality of the MQA and the methodology it uses.

If this page still does not answer all your questions, please feel free to contact us via our feedback form at the end of the page.

[Metode for metadata-kvalitetsvurdering](#)

Omfang af undersøgelsen

Formålet med MQA er at besvare følgende spørgsmål:

Hvad er metadatakvaliteten for data fra den offentlige sektor i hele det europæiske område, og hvor er de største forhindringer for opnåelsen af bedre kvalitet?

Baseret på dette undersøger MQA'en p.t. følgende konkrete spørgsmål:

- Kompabilitet af DCAT-AP og afledte DCAT-AP
- Oplysninger, som DCAT-AP ikke er forpligtet til at offentliggøre
- Tilgængelighed af de data, der er omtalt i metadataene via Access- og Download-URL
- Maskinlæsbarhed af de refererede data
- Brug af licenser

Hvert spørgsmål munder igen ud i individuelle undersøgelser, som beskrives indgående nedenfor.

Hvad vi ikke dækker

The MQA is limited by the metadata it can examine. The investigation is limited exclusively to the metadata that data.europa.eu collects during the harvesting process. If there are errors in the source metadata, these can falsify the overall result. To limit this error potential, the MQA provides a validation service that can be used by data providers to validate their metadata for valid formats and compliant DCAT-AP before integrating it into the harvesting process.

[DCAT-AP SHACL validation service web page](#)

[DCAT-AP SHACL validation service API](#)

MQA-processen

For hver datahøst kontrolleres metadaterne også af MQA. MQA måler kvaliteten af forskellige indikatorer, og hver indikator forklares i tabellerne nedenfor. Resultaterne af kontrollerne gemmes som Data Quality Vocabulary ([DQV](#)). DQV er en specifikation af W3C, der anvendes til at beskrive kvaliteten af et datasæt.

Da tilgængeligheden kan være volatil, er det nødvendigt med gentagne kontroller af accessURL og downloadURL. Af denne grund kontrollerer MQA løbende tilgængeligheden af alle distributioner. I modsætning til verifikationen af de øvrige indikatorer, har denne en længere løbetid, idet distributionerne kontrolleres via HTTP, og hver anmodet URL kan have en længere responstid. MQA'en anvender en mekanisme, der tager højde for, at hver URL undersøges igen for tilgængelighed inden for nogle få uger fra seneste revision.

Antagelser

MQA er baseret på følgende antagelser.

Brug af ikke-obligatoriske felter

Vi mener ikke, at udfyldning af DCAT-AP's obligatoriske felter alene er tilstrækkelig til at levere metadata af høj kvalitet. Af denne årsag kontrollerer evalueringen også felter, der ikke er specificeret som obligatoriske ifølge DCAT-AP. De præcise felter, der kontrolleres, er anført nedenfor.

Identisk indhold for flere distributioner

Hvis et datasæt indeholder mere end én distribution, er alle distributioner identiske i indhold, de adskiller sig kun med hensyn til fremstillingen af dataene. F.eks. kan et datasæt have to distributioner, én der tilbyder dataene som PDF og den anden, der tilbyder identiske data som maskinlæsbar RDF/XML.

Dimensioner

Dette afsnit beskriver alle dimensioner, som MQA undersøger for at bestemme kvaliteten. Dimensionerne er afledt af [FAIR- principper](#).

Tilgængelighed

Følgende tabel beskriver de parametre, der hjælper mennesker og maskiner med at finde datasæt. Der kan højst opnås 100 point i dette område.

Indikator	Beskrivelse	Parameter	Vægt
Brug af nøgleord	Nøgleord støtter søgningen direkte og gør således datasættet lettere at finde.	Systemet kontrollerer, om der er defineret nøgleord. Antallet af nøgleord har ingen betydning for bedømmelsen. Dataset dcat:keyword	30
Kategorier	Kategorier hjælper brugere med at udforske datasæt tematisk.	Det kontrolleres, om en eller flere kategorier er henført til datasættet. Antallet af tildelte datasæt har ikke nogen betydning for bedømmelsen. Dataset dcat:theme	30
Geografisk søgning	Brug af geografiske oplysninger vil gøre det muligt for brugere at finde datasættet med en geografisk afgrænset søgning	Det kontrolleres, om denne egenskab er sat eller ej. Dataset dcat:spatial	20
Tidsbaseret søgning	Brug af tidsmæssige oplysninger vil gøre det muligt for brugere at gennemføre en tidsmæssigt afgrænset søgning.	Det kontrolleres, om denne egenskab er sat eller ej.	20

Tilgængelighed

Følgende tabel beskriver, hvilke parametre der anvendes til at fastlægge, om adgang til de af distributionerne henviste data er garanteret. Der kan opnås højst 100 point i dette område.

Indikator	Beskrivelse	Parameter	Vægt
AccessURL tilgængelighed	AccessURL'en er ikke nødvendigvis et direkte link til dataene, men kan også henvise til en URL, der giver adgang til datasættet, eller hvor flere oplysninger er tilgængelige om datasættet.	Den specificerede URL kontrolleres for tilgængelighed via en HTTP HEAD-forespørgsel. Hvis den responderede statuskode ligger i 200- eller 300-intervallet, vurderes tilgængeligheden af ressourcen positivt. Distribution dcat:accessURL	50
DownloadURL	DownloadURL'en er et direkte link til de refererede data.	Det kontrolleres, om egenskaben er sat eller ej Distribution dcat:downloadURL	20
DownloadURL tilgængelighed	Hvis der findes en downloadURL, kontrolleres tilgængeligheden.	Den specificerede URL kontrolleres for tilgængelighed via en HTTP HEAD-forespørgsel. Hvis den responderede statuskode ligger i 200- eller 300-intervallet, vurderes tilgængeligheden af ressourcen positivt. Distribution dcat:downloadURL	30

Interoperabilitet

Følgende tabel beskriver de parametre, der anvendes til at bestemme, om en distribution anses for at være interoperable. Ifølge antagelsen 'identisk indhold med flere distributioner' er det kun distributionen med det højeste antal point, der anvendes til at beregne pointene. Der kan højst opnås 110 point i dette område.

Indikator	Beskrivelse	Parameter	Vægt
Format	Dette felt specificerer distributionens filformat.	Det kontrolleres, om egenskaben er korrekt sat eller ej. Distribution dct:format	50
Medietype	Dette felt specificerer distributionens medietype.	Det kontrolleres, om egenskaben er sat eller ej. Distribution dcat:mediaType	10
Format / Medietype fra vokabular	Kontrollerer, om format og medietype hører til et kontrolleret vokabular.	The format vocabulary can be found in the data.europa.eu GitLab repository . The media type is check against the IANA list Distribution dct:format dcat:mediaType	10
Ikke-proprietær	Kontrollerer, om distributionens format er ikke-proprietært.	The distribution is considered as non-proprietary if the specified format and media type is contained in the corresponding data.europa.eu GitLab repository vocabulary. Distribution dct:format	20
Maskinlæsbarhed	Kontrollerer, om distributionens format er maskinlæsbart.	The distribution is considered as machine-readable if the specified format and media type is contained in the corresponding data.europa.eu GitLab repository vocabulary. Distribution dct:format	20
DCAT-AP-kompabilitet	DCAT-AP compliance is calculated across all sources and datasets available on a catalogue. This check is only performed if the metadata is originally harvested as DCAT-AP or as a valid derivate. DCAT-AP is a specification for describing linked public data in Europe. The data.europa.eu portal may also harvest metadata which does not fully comply to DCAT-AP. In order to increase conformity to DCAT-AP, the MQA checks each metadata for its DCAT-AP compliance.	The metadata is validated against a set of SHACL shapes . The metadata is not compliant, if the SHACL validation reports at least one issue. The MQA uses data.europa.eu's DCAT-AP SHACL validation service . SHACL is a recommendation from the W3C and is used for validating RDF graphs against a set of shapes.	30

Genanvendelighed

Følgende tabel beskriver, hvilke parametre der anvendes til at kontrollere genanvendeligheden af dataene. Der kan højst opnås 75 point i dette område.

Indikator	Beskrivelse	Parameter	Vægt
Licensoplysninger	En licens er værdifuld information for genanvendelse af data.	Det kontrolleres, om egenskaben er sat eller ej Distribution dct:license	20
Licensvokabular	Vi vil gerne begrænse angivelsen af forkerte licensoplysninger. F.eks. støder vi på mange CC-licenser, der mangler versionering.	This section describes all dimensions that the MQA examines in order to determine the quality. The dimensions are derived from the FAIR principles . The MQA recommends and credits the usage of controlled vocabularies. The data.europa.eu portal publishes its controlled vocabularies in GitLab. The vocabularies are derived from the EU Vocabularies . Distribution dct:license	10
Adgangsbegrænsninger	Dette felt indikerer, hvorvidt adgangen til dataene er offentlig eller begrænset.	Det undersøges, om egenskaben er sat eller ej. Dataset dct:accessRights dcat:mediaType	10
Vokabular for adgangsbegrænsninger	Brugen af et kontrolleret vokabular øger genanvendeligheden.	Det kontrolleres, om <u>kontrollerede vokabular for adgangsrettigheder</u> er anvendt. Dataset dct:accessRights	5
Kontaktoplysninger	Kontaktpunktet indeholder oplysninger om, hvem du skal henvende dig til, hvis du har spørgsmål til dataene.	Det kontrolleres, om egenskaben er sat eller ej Dataset dct:contactPoint	20
Udgiver	Udgiveren er en person eller organisation, der har offentliggjort dataene.	Det kontrolleres, om egenskaben er sat eller ej Dataset dct:publisher	10

Kontekst

Følgende tabel viser visse letvægtsegenskaber, der giver større kontekst for brugeren. Der kan højest opnås 20 point i dette område.

Indikator	Beskrivelse	Parameter	Vægt
Rettigheder	I nogle tilfælde kan der ikke anvendes en specifik licens til et datasæt. Feltet 'Rettigheder' kan anvendes til at angive en reference til en ressource, der vil informere en bruger om de rettigheder han har, når han bruger datasættet.	Det kontrolleres, om denne egenskab er sat eller ej. Distribution dct:rights	5
Filstørrelse	Specificerer størrelsen af filen i bytes.	Det kontrolleres, om denne egenskab er sat eller ej. Distribution dct:byteSize	5
Udstedelsesdato	Den dato, på hvilken datasættet eller distributionen blev frigivet.	Det kontrolleres, om denne egenskab er sat eller ej. Dataset and Distribution dct:issued	5
Ændringsdato	Den dato, på hvilken datasættet eller distributionen senest blev ændret.	Det kontrolleres, om denne egenskab er sat eller ej. Dataset and Distribution dct:modified	5

Bedømmelse

Den endelige bedømmelse sker via fire bedømmelsesgrupper. Kortlægningen af point i forhold til bedømmeskategorien udtrykkes udelukkende via bedømmeskategorierne. Dette sætter leverandørerne i stand til opnå den højeste bedømmelse selv med et lille fradrag af point.

Dimensioner	Maksimumpoint
Tilgængelighed	100
Tilgængelighed	100
Interoperabilitet	110
Genanvendelighed	75
Kontekst	20
Sum	405

Bedømmelse	Pointinterval
Fremragende	351 - 405
God	221 - 350
Tilstrækkelig	121 - 220
Dårlig	0 - 120
