

# Open data maturity

## 2025 country factsheet

## State of play at a glance

Switzerland advanced its open data ecosystem through strategic policy reform, technical modernisation and community-driven impact. A milestone was the implementation of Article 10 of the Federal Act on the Use of Electronic Means for the Fulfilment of Authorities' Tasks, which formalised the 'open by default' principle at the federal level. This legal foundation supports the ongoing Masterplan OGD 2024–2027, which guides federal agencies in publishing machine-readable data and aligns national efforts with EU standards. Cantonal governments also expanded their own open data strategies, reinforcing a multi-level governance approach.

The opendata.swiss portal began transitioning from CKAN to the semantic triple-store-based Piveau platform, with a full launch planned for 2026/2027. This upgrade will enhance metadata expressiveness and interoperability in line with FAIR principles. Several new cantonal portals were also launched, broadening regional data availability.

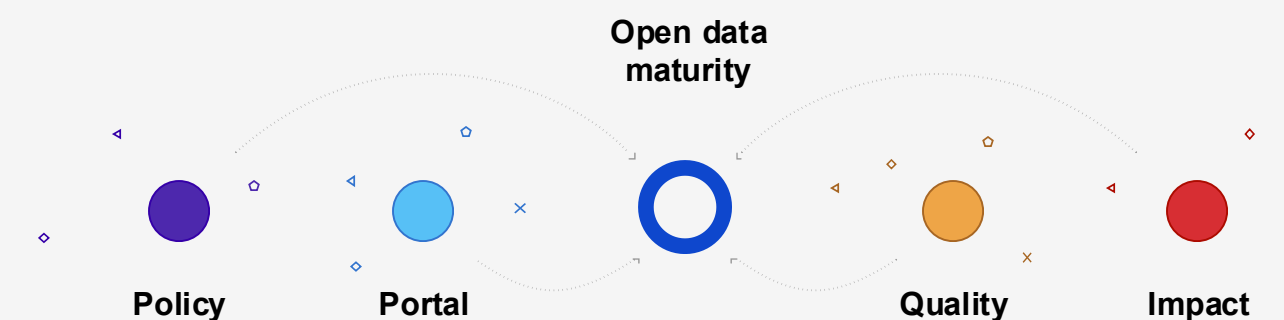

To improve data quality, Switzerland implemented a metadata quality dashboard based on the European metadata quality assessment framework. The national metadata standard, DCAT-AP CH, was upgraded to version 3 and the SHACL checker was enhanced to validate all metadata properties, ensuring completeness and alignment with EU benchmarks.

On the impact front, MeteoSwiss made its meteorological and climatological datasets freely available, significantly expanding public access to high-value environmental data. Continuous monitoring of portal usage and downloads, along with a vibrant open data community and regular events, further supported innovation and cross-sectoral engagement.

# Assessment methodology

Open data maturity is measured on four thematic dimensions: policy, portal, quality and impact. Each dimension contributes an equal 25 % towards the overall maturity score.

**Policy**  
Investigates the open data policies and strategies in place in the countries, the national governance models for managing open data and the measures applied to implement those policies and strategies.

**Portal**  
Investigates the functionality of national open data portals, the extent to which users' needs and behaviour are examined to improve the portal, the availability of open data across different domains and the approach to ensuring the portal's sustainability.

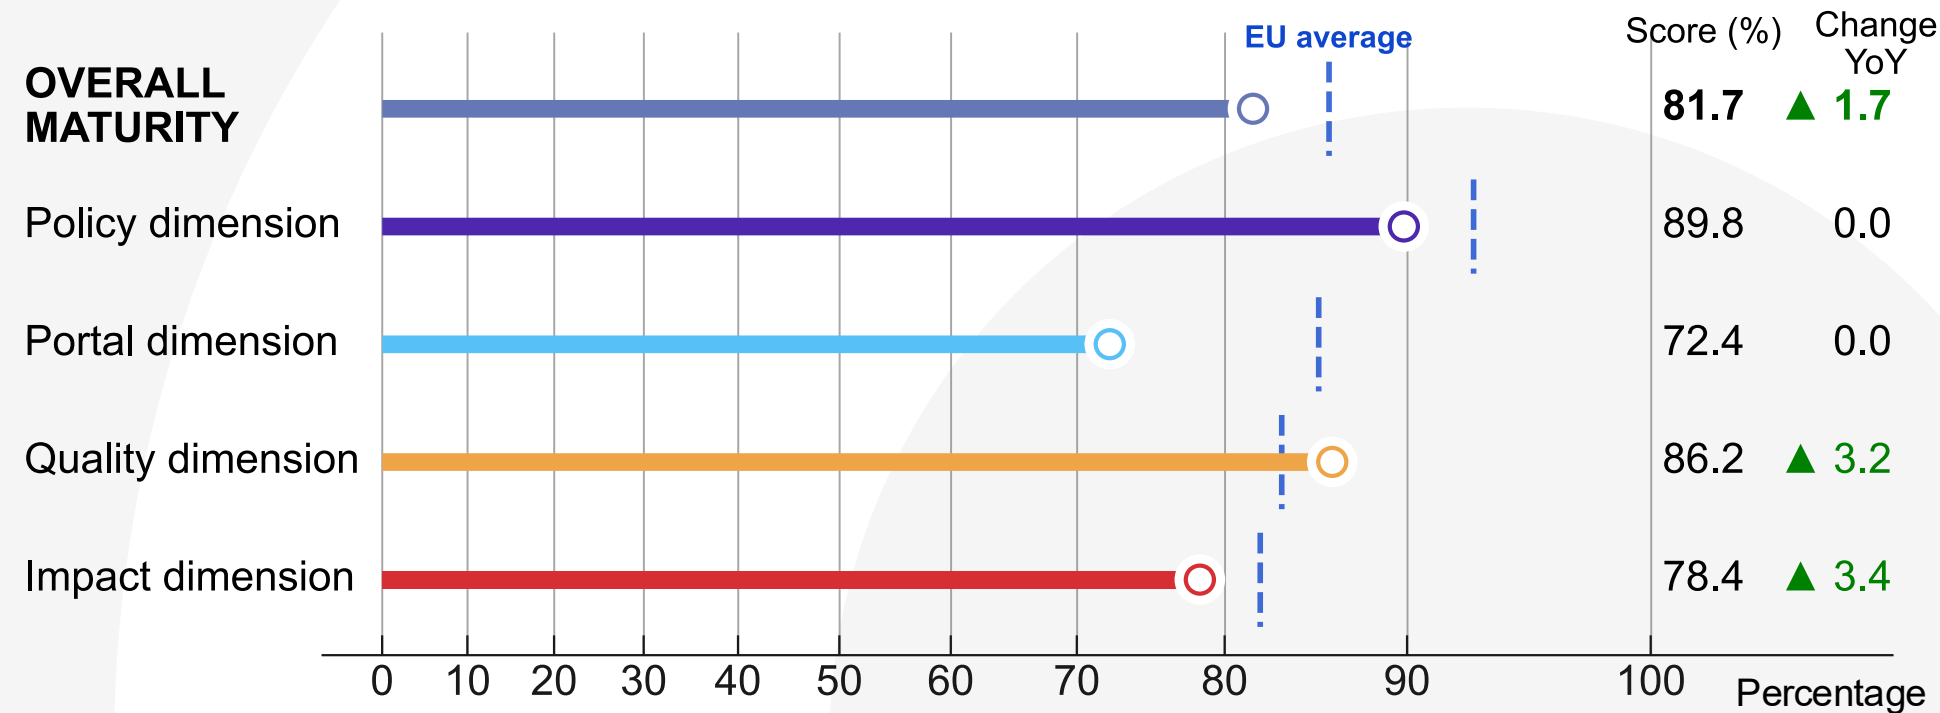

**Quality**  
Investigates the measures adopted by portal managers to ensure the systematic harvesting of metadata, the monitoring of metadata quality and compliance with the DCAT-AP metadata standard and the quality of the deployment of the published data on the national portal.

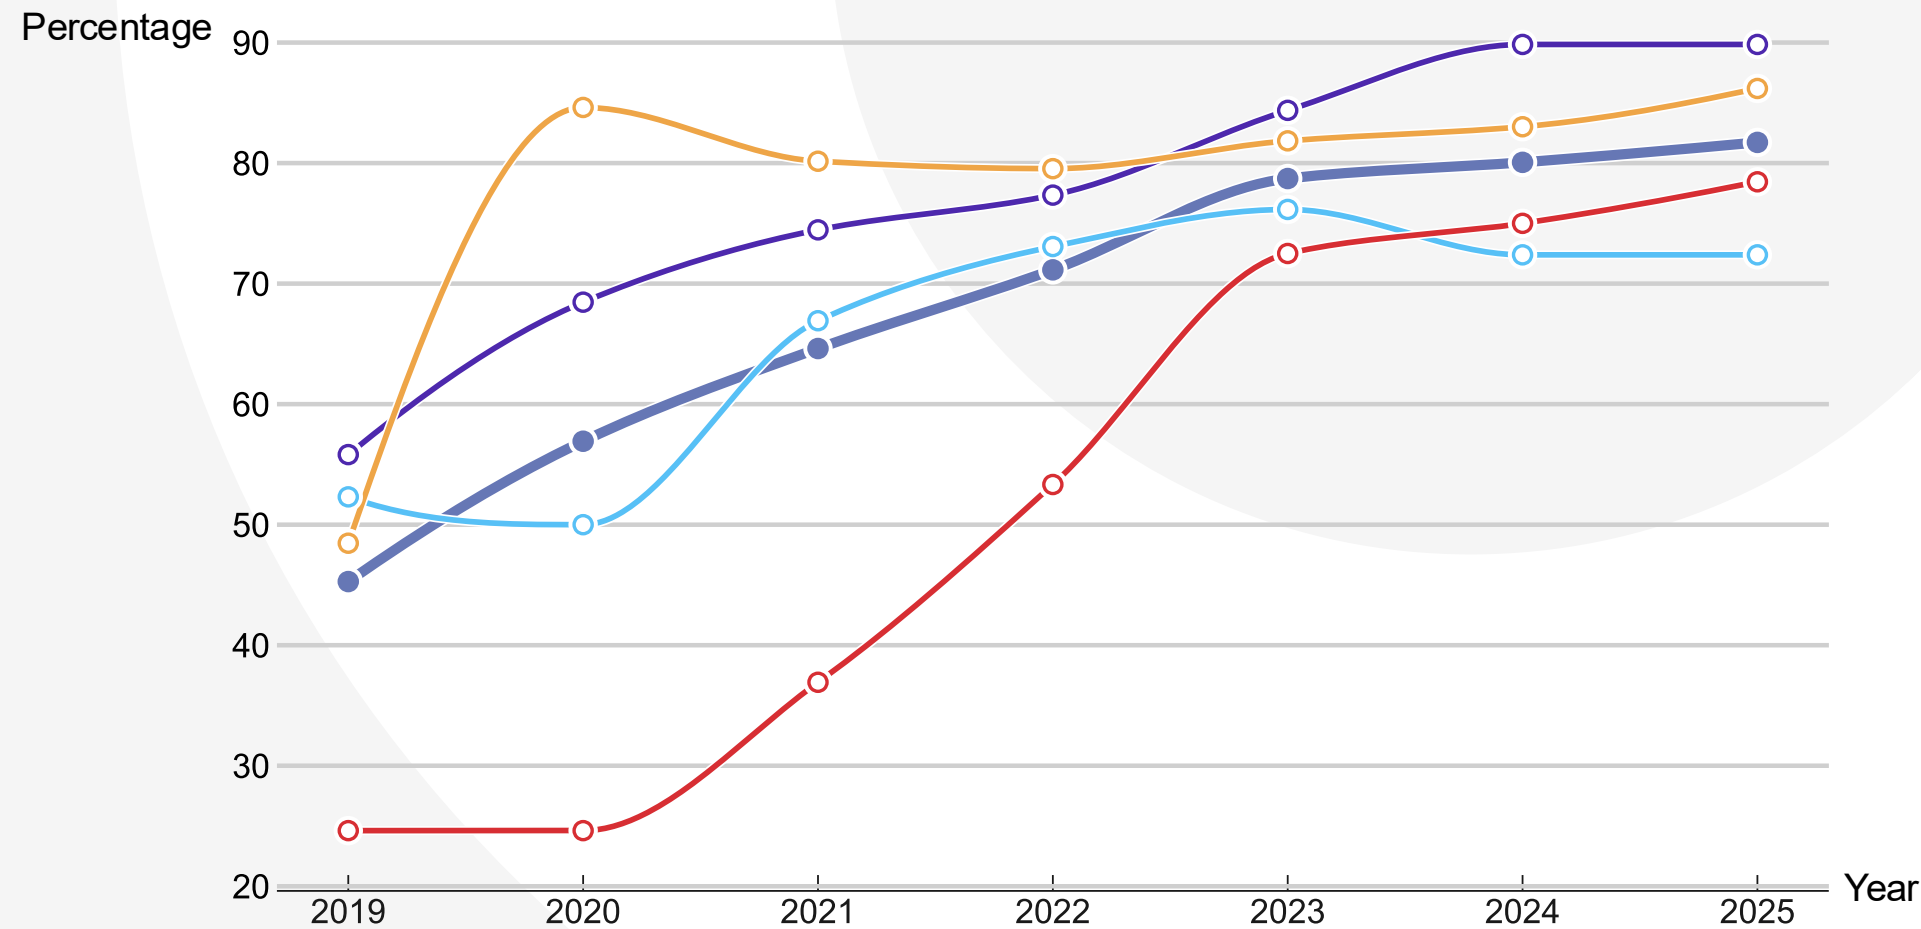

**Impact**  
Investigates how well countries define and measure data reuse, the steps taken to assess reuse and user needs and the presence of reuse examples in the domains of government, society, the environment and the economy.

2025 maturity scores of Switzerland

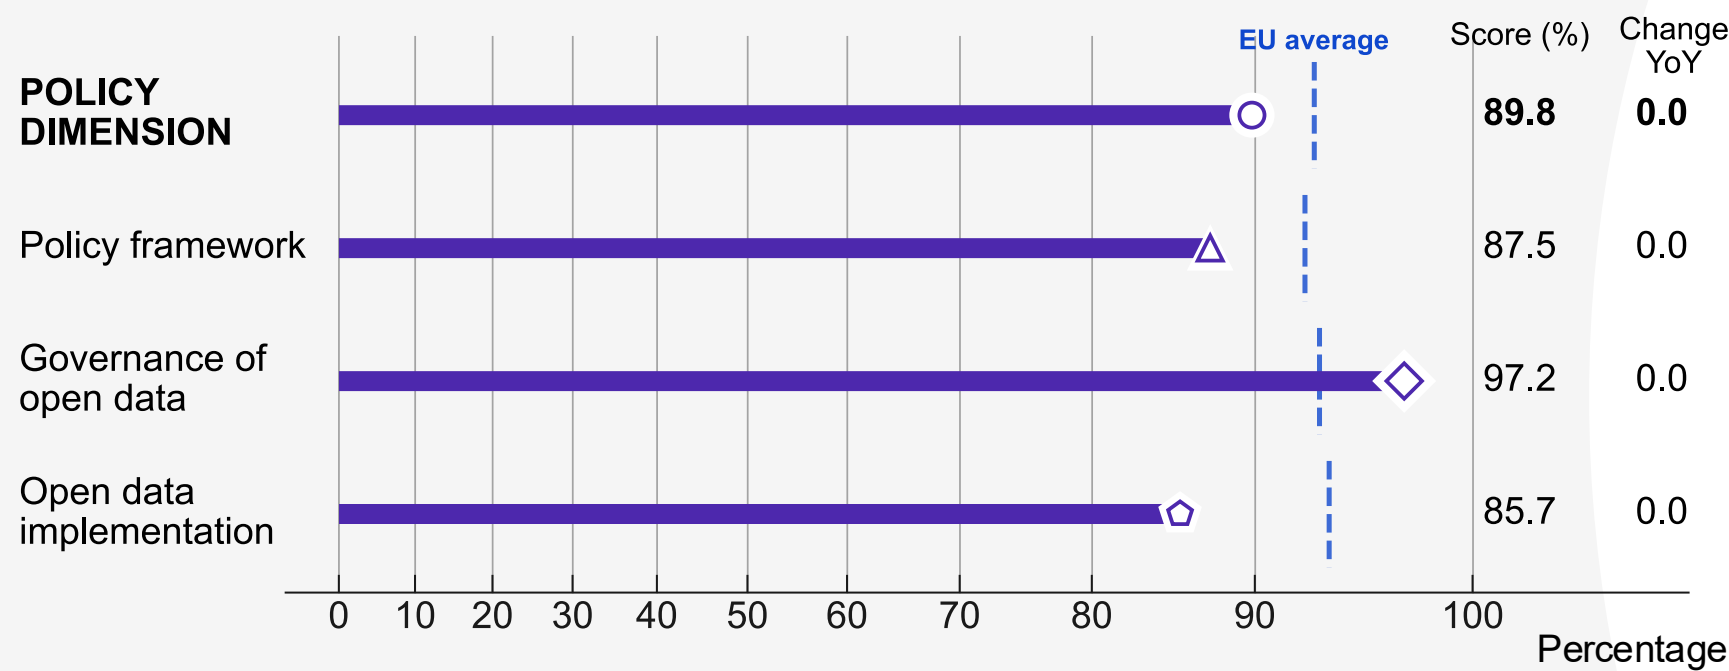

Maturity scores of Switzerland over time

Policy dimension

2025 policy maturity scores of Switzerland

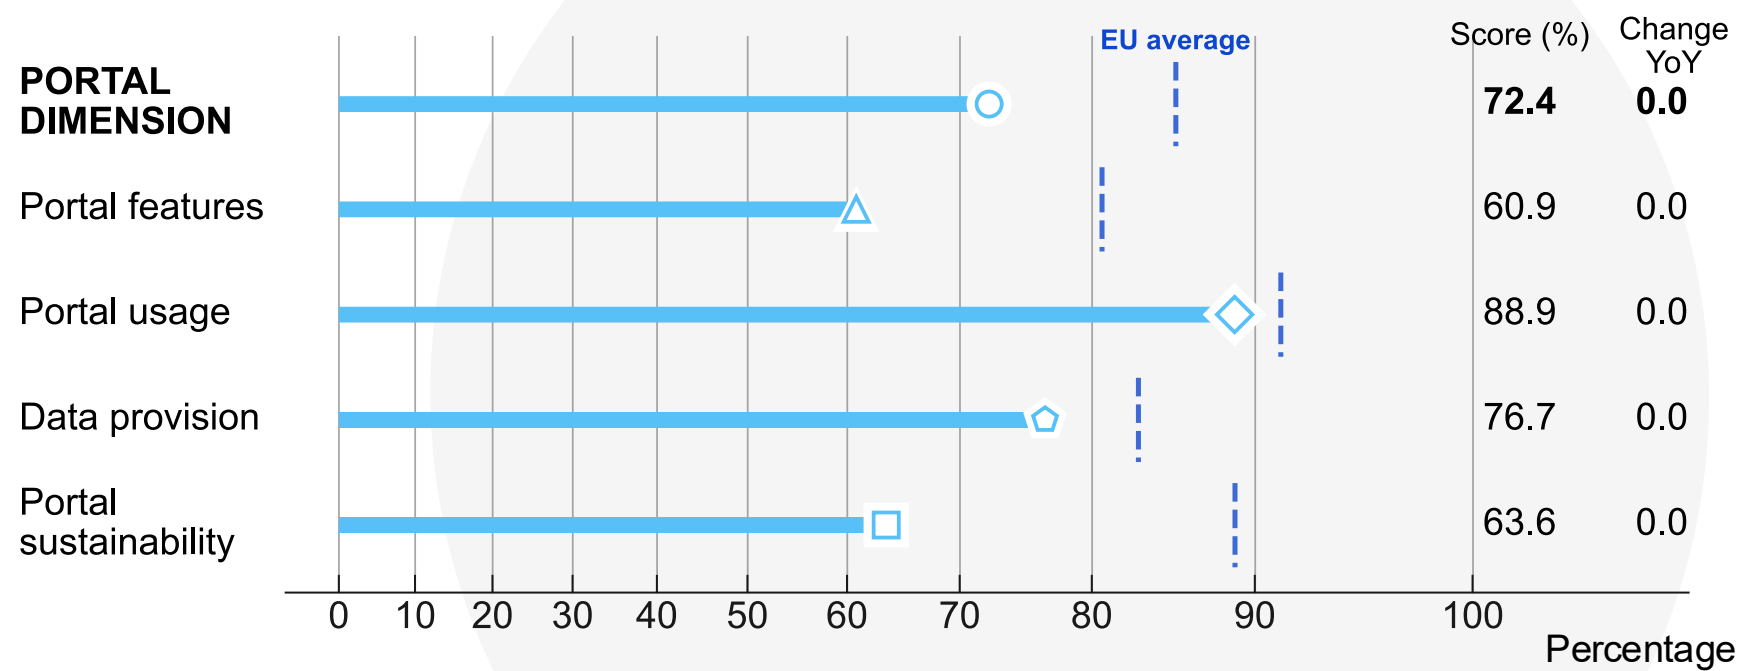

Key questions

- Does the national open data policy/strategy include an action plan?  Yes
- To what degree do local/regional public bodies conduct open data initiatives?  Majority
- Are there processes to ensure that the open data policies/strategy are implemented?  Yes

Portal dimension

2025 portal maturity scores of Switzerland

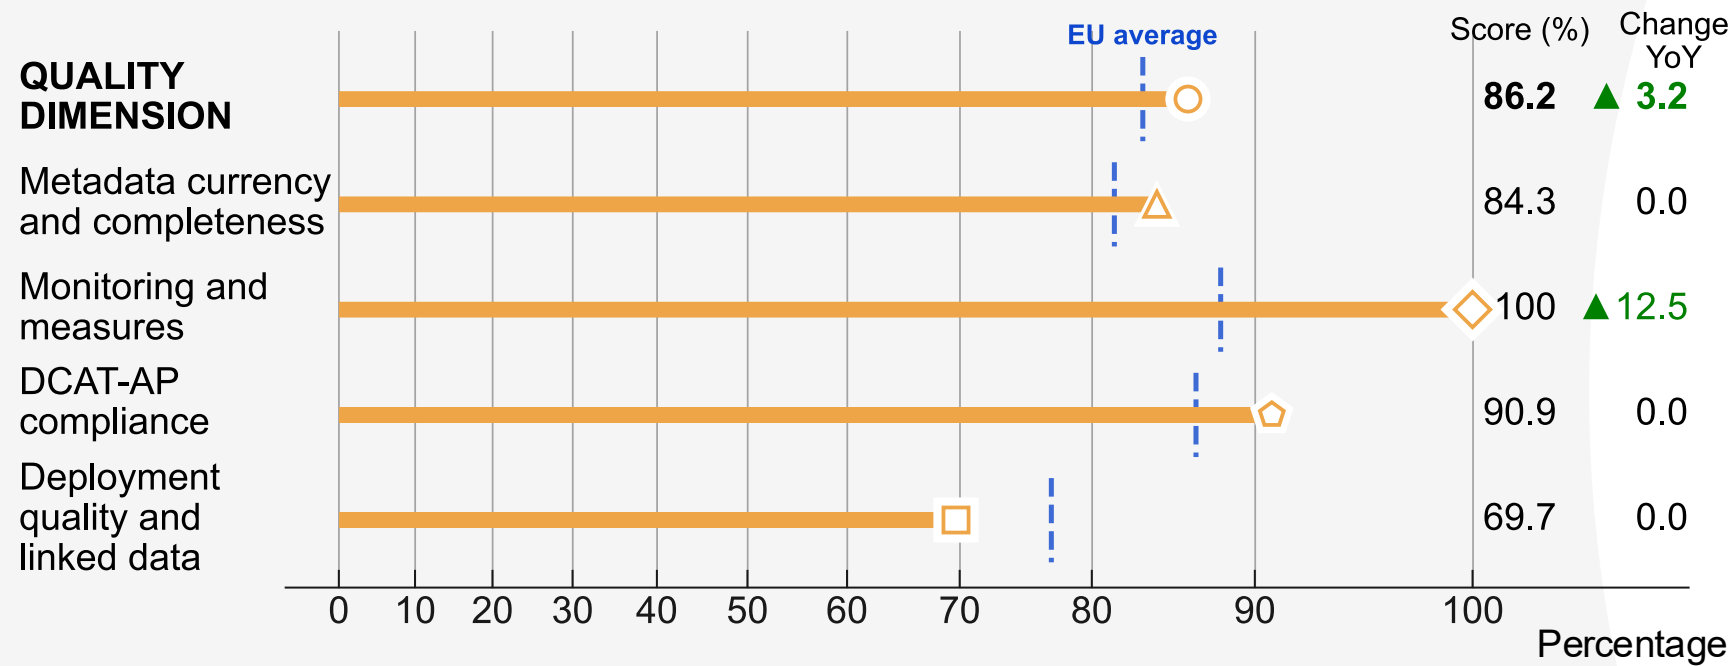

Key questions

- Do you monitor the portal's traffic?  Yes
- To what degree do public sector data providers contribute data to the portal?  About half
- Does the national portal allow users to see what data exists but cannot be made available as open data?  Yes

# Quality dimension

2025 quality maturity scores of Switzerland

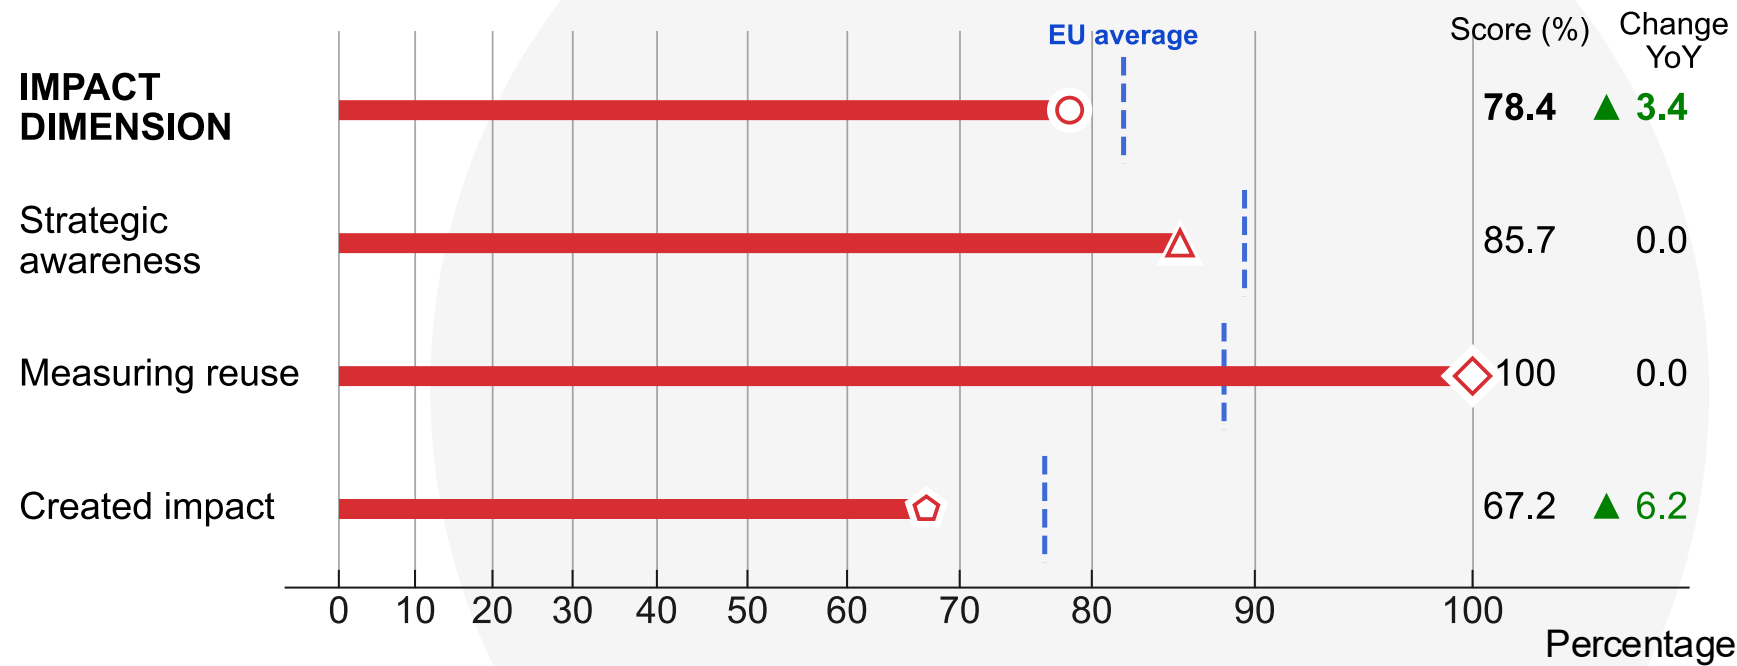

## Key questions

- Do you monitor the quality of the metadata available on your portal?  Yes
- Do you set any standards on metadata quality that data providers must abide by?  Yes
- Do you use a model to assess the quality of deployment of data in your country?  Yes

# Impact dimension

2025 impact maturity scores of Switzerland

## Key questions

- Do you have a definition of open data reuse in your country?  No
- Are there any processes in place to monitor the level of reuse of your country's open data?  Yes
- Do you have a methodology in place to measure the impact of open data?  Yes
