## ADDRESSING BARRIERS

### Organisational

To address the issue of a lack of open data competences and skills, a data opening project involving 50 public sector institutions has been launched. The project will positively influence the availability of open data.

### Legal

A challenge in Lithuania is that some legislation allows for the restriction of data disclosure. Therefore, legislation has been developed that obliges to provide metadata of open data to the national open data portal.

### Awareness

Another challenge in Lithuania is that the concept of open data is not yet understood very well by everyone. Therefore trainings, seminars and multiple promotional activities are organised.

## OPEN DATA RE-USE

The national open data portal of Lithuania provides a designated area for open data use cases to provide further insight and inspiration into how open data can be used to create services, applications, and products. Currently, the page shows 10 open data re-use cases.

An example of open data re-use in Lithuania is [Kurgyvenu.lt](https://kurgyvenu.lt). The website provides information on the users' living environment, such as crime rates, air pollution and noise levels, school rankings and real estate market values. The website uses open data from local governments, public authorities, heat supply companies and other institutions.

Another example is [Atviras Teismas](https://atviras.teismas.lt). The website uses statistics obtained from the courts by the National Courts Administration to show information about courts, such as the number of cases per year, the time cases last, the average court budget and the average experience of judges working in court.
