

Introduction to Geospatial Data

29 September 2021

Introduction

Esther Huyer
Capgemini Invent
Project manager

Laura van Knippenberg
Capgemini Invent
Support to EU Institutions
& Member States

Antje Kügeler
con terra
Geospatial expert

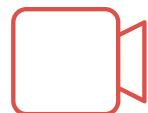

Dr. Simon Jirka
52°North
Geospatial and real-
time data expert

Supported by
Christian Autermann (52°North)
Jan van Zadelhoff (con terra)

Agenda of today

- Opening
- Introduction to data.europa.eu and the data.europa academy
- Introduction to geospatial data and how to find it on data.europa.eu
- Break
- How to access and use geospatial data from data.europa.eu
- Break
- Discussion
- Q&A and summary
- Feedback poll and closing

Rules of the game

The training will be recorded

Please mute yourselves during the training

Please reserve 3 min after the training to help us improve
by filling in our feedback form

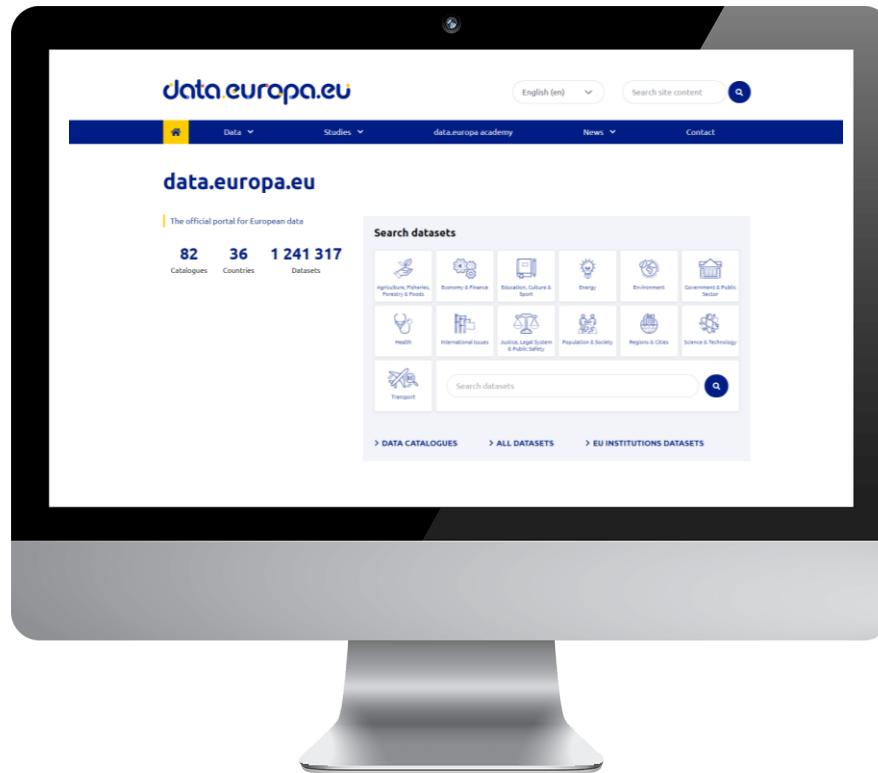

For questions, please use sli.do. Vote for the questions that
are of most interest to you, those will be discussed later

Ask your questions in sli.do using the code **geospatial**

The image displays two side-by-side browser windows. The left window is a Slido participant joining screen, showing the text "Joining as a participant?" and a text input field containing "# geospatial". The right window is a data.europa.academy Q&A section, which is currently empty with the message "There are no questions asked yet. Ask the first one!".

Data.europa.eu provides access to open data from Member States and EU institutions

Data.europa.eu provides access to open data from European, national and geo data portals

Data.europa.eu supports data providers from Member States and EU institutions in publishing open data

Data.europa.eu engages with the open data community to stimulate the re-use of open data

This is the first training of the ***data.europa academy***, which offers learning to the open data community

The **data.europa academy** serves the open data community in becoming more knowledgeable about open data

In the **data.europa academy** you can find training courses ranging from the open data basics to new trends and challenges in the open data landscape

The **curriculum** is constantly updated with new courses and new learning material based on research and best practices

Find your course on data.europa.eu/academy

A close-up photograph of a hand-drawn map on a piece of paper. The map features a network of dashed black lines forming a grid-like pattern. Several red 'X' marks are placed along these lines, notably one at the center and another near the top right. A small rectangular area is outlined with a solid black line in the bottom left corner. A person's hands are visible; one hand wears a silver ring with a cross-shaped pattern. The paper has a slightly aged, yellowish tint.

Where are you now?

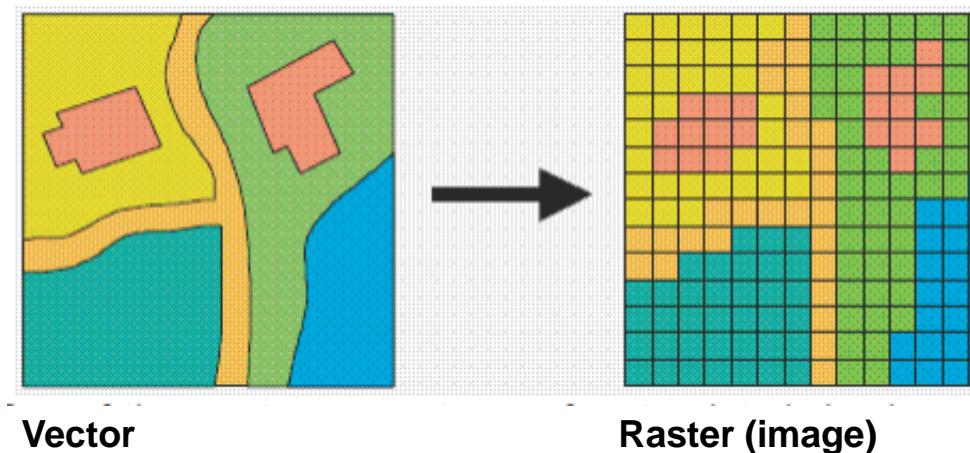

Please go to sli.do
and enter **geospatial**

Introduction to geospatial data

- Data often has a *location* component
- Geodata contains information on properties that are linked to a position on earth
- The geospatial context will often uncover interesting revelations
- Information on the **where** often makes data more meaningful

Geospatial data types

- Different ways to represent the same geographic feature
- Vector vs. raster data

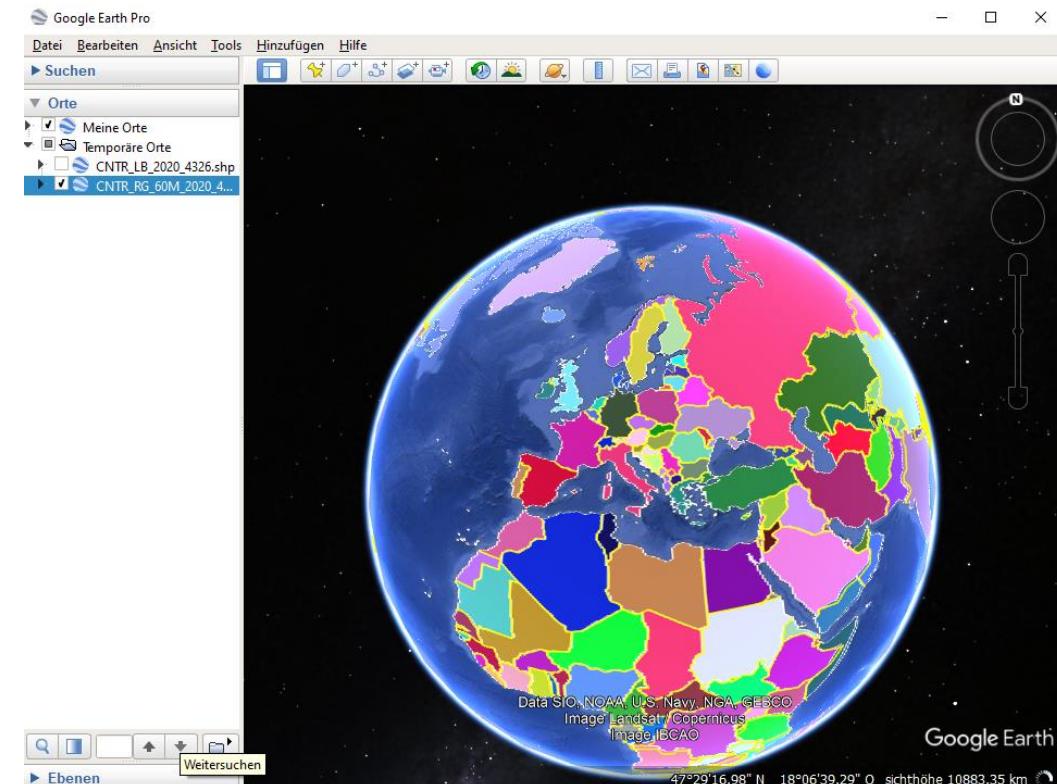

- Coordinates (x, y)

We will talk about *indirect* references to location later (e.g., by including a postal code or administrative area).

Geospatial data formats

- Shape
- GeoJSON
- GPX
- GeoTiff
- GeoPackage
- GML (Geographic Markup Language)
- KML (Keyhole Markup Language)
- ...

Geospatial Services

- Geospatial information is often delivered via geoservices, e.g.
 - OGC
 - Web Map Service (WMS)
 - Web Map Tile Service (WMTS)
 - Web Feature Services (WFS)
 - OGC API Features
 - ...
 - INSPIRE
 - View Services
 - Download Services
 - ATOM Feeds

<https://www.ogc.org>

Geospatial data on data.europa.eu

Demo

- data.europa.eu

data.europa.eu/data/datasets?locale=en&dataScope=countryData&country=lu&page=2

The screenshot shows the data.europa.eu homepage with a search bar and navigation menu (Home, Data, Studies, Training, News, Contact). A sidebar on the left lists filters for data quality (Excellent, Good+, Sufficient+, Any) and formats (ZIP, GeoJSON, PDF, CSV, Excel XLSX, GML, XML, KML, WFS). Three main dataset cards are displayed:

- 3D Buildings (LOD 1 - Level of Detail 1)**: Created 28.05.2019 02:00 by Geoportal of the Grand-Duchy of Luxembourg. Description: The buildings are derived from data from the topographic database (BD-TOPO-L) of the Cadastre and Topography Administration, based on 2013 aerial imagery. Data of type LOD 1 (Level of detail 1) represents simple blocks without details on roofs. The height of the blocks is defined by the average height of the outer perimeter of the roofs from photogrammetri...
- 3D Buildings (LOD 2.3 - Level of Detail 2.3) of Diekirch and Bastendorf**: Created 03.06.2019 02:00 by Geoportal of the Grand-Duchy of Luxembourg. Description: The buildings are modeled on the basis of a photogrammetric exploitation of the aerial images of 2017. The definition of the LOD 2.3 used includes a detailed modeling of the shape of the roofs (without details like skylights, chimneys, antennas, solar panels, ...) with a vertical projection to the ground. These data can be consulted in the 3D web viewer of...
- 3D components (LOD 1 © Level of Detail 1)**: Created 28.05.2019 10:16 by La plateforme de données luxembourgeoise. Description: The contents are derived from the data from the topographic data base (BD-TOPO-L) of the Cadastre and Topography Administration, based on 2013 images. The LOD 1 (Level of detail 1) data represent simple blocks with no detail at the roof level. # Height of bet The height of the blocks is defined by the average height of the vertex in the outside of roofs from th...

How to access and use geospatial data

- Geodata usually includes coordinates
 - Can be used in Geographical Information Systems (GIS)
- What if the data you want to display on a map contains no coordinates?

Demo data.europa.eu

Find an interesting dataset to work with

Find an interesting dataset

- COVID-19 weekly situation update
 - Contains no coordinates (“geometry”) *but a country code*

COVID-19 Coronavirus data - weekly (from 17 December 2020)

The dataset contains a weekly situation update on COVID-19, the epidemiological curve and the global geographical distribution (EU/EEA and the UK, worldwide). Since the beginning of the coronavirus pandemic, ECDC's Epidemic Intelligence team has collected the number of COVID-19 cases and deaths, based on reports from health authorities worldwide. This... COVID-19 testing

These data files contain information about COVID-19 testing rate and test positivity, by country and by region. They are updated weekly. The figures are based on multiple data sources. The main source is data submitted by Member States to the European Surveillance System (TESSy). When not available, ECDC compiles data from public online sources. EU/EE... Find geodata with country codes

The screenshot shows the homepage of data.europa.eu. At the top, there is a navigation bar with links for English (en), Search site content, Data, Studies, Training, News, and Contact. Below the navigation bar, the main content area features the data.europa.eu logo and the text "The official portal for European data". It displays statistics: 82 Catalogues, 36 Countries, and 1 237 811 Datasets. To the right, there is a "Search datasets" section with a grid of icons representing various data categories: Agriculture, Fisheries, Forestry & Foods; Economy & Finance; Education, Culture & Sport; Energy; Environment; Government & Public Sector; Health; International Issues; Justice, Legal System & Public Safety; Population & Society; Regions & Cities; Science & Technology; and Transport. Below the grid is a search bar with the placeholder "Search datasets" and a magnifying glass icon. At the bottom of the search section, there are links for DATA CATALOGUES, ALL DATASETS, and EU INSTITUTIONS DATASETS.

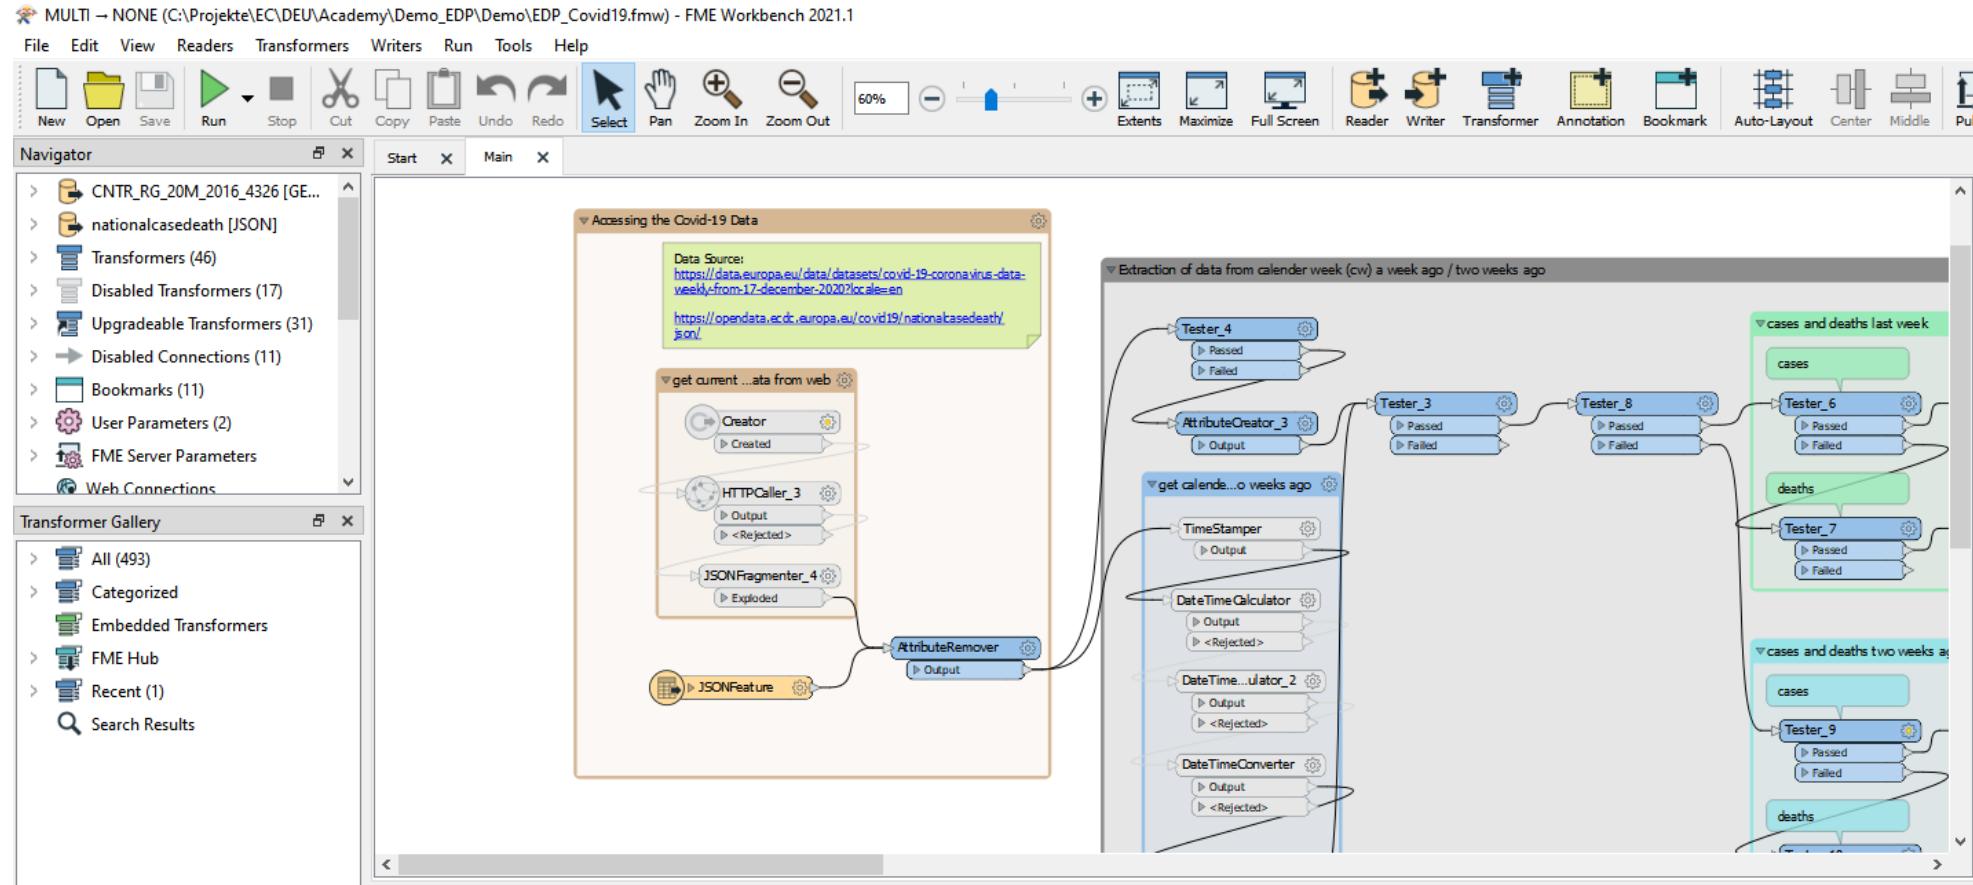

Combine the data

About Content Legend

Make your own map

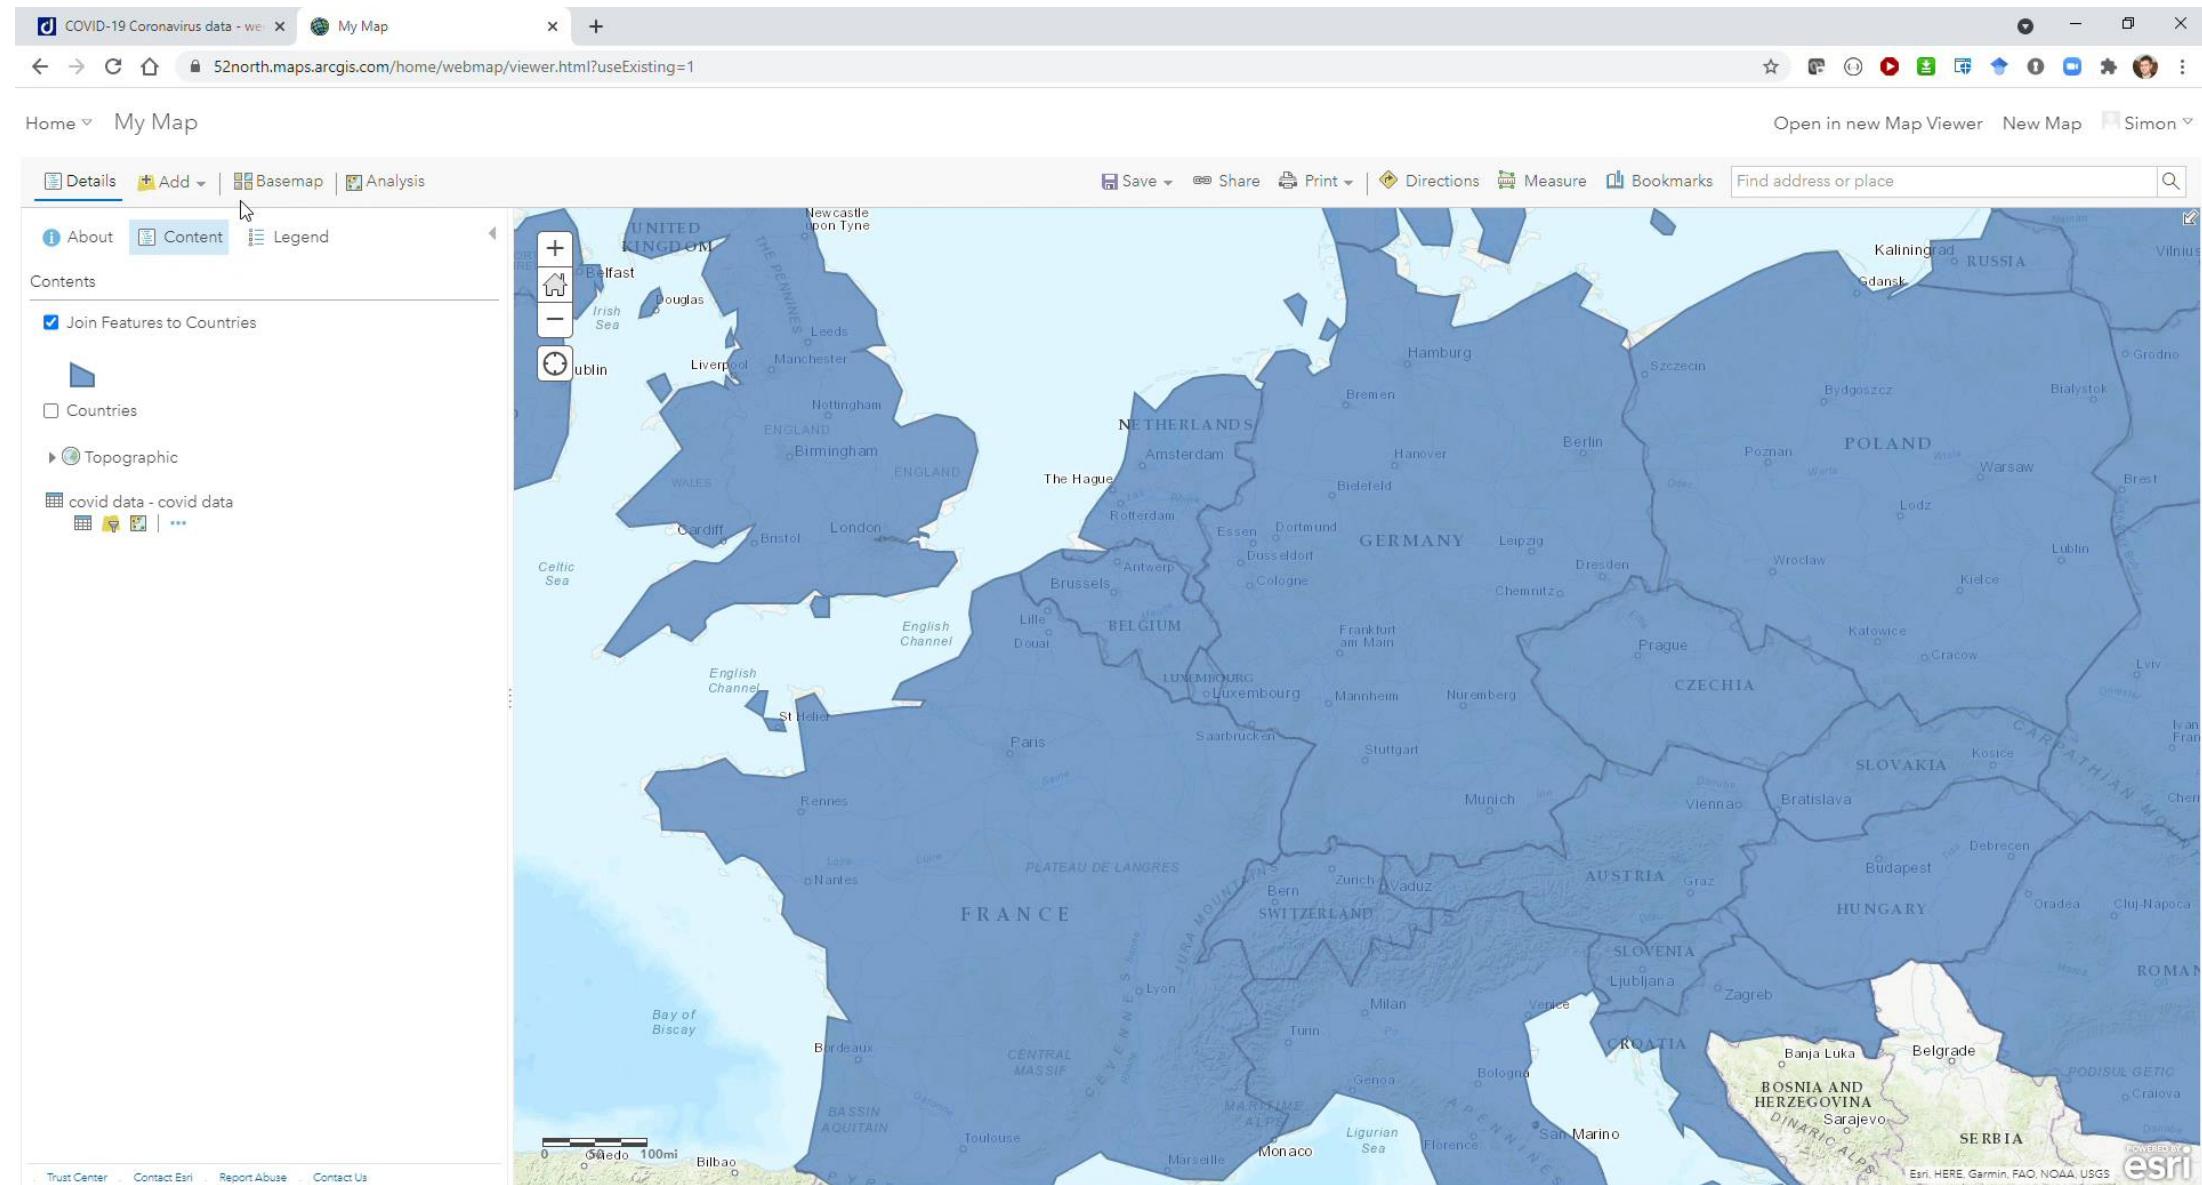

It's easy to make your own map. Just follow these steps:

1. Choose an area.
Pan and zoom the map to an area or search by its name or address.
2. Decide what to show.
Choose a Basemap then Add layers on top of it.
3. Add more to your map.
Add map notes to draw features on the map.
Display descriptive text, images, and charts for map features in a pop-up.
4. Save and share your map.
Give your map a name and description then share it with other people.

Demo - summary

- Found 2 datasets on data.europa.eu
 - COVID-19 weekly situation update (from ECDC)
 - CSV (comma separated values)
 - Contains no coordinates (“geometry”)
 - Country areas (from ESTAT)
 - GeoJSON
 - contains geometry
- Created a new datasets from the 2 sources
- Displayed the data on a map
