

Share OpenData and show on Google Map - just upload a CSV file and Drupal will do it all for you

Submitted on 21 Jul 2012 by Tine Müller

I have earlier made a blog post “**Easy way for Public Sector to share their data for download**” <http://epsiplatform.eu/content/easy-way-public-sector-share-their-data-d...> where I tell and show a video about how 98 councils in Denmark can login and make info about public toilets one at a time.

Now I have figured out if councils want to upload a lot of toilets at one time it can be done with a CSV file. And it could be for ANY data and not just for toilets. This **Video** <http://bit.ly/SLLlyh> show how to upload a CSV file to a Drupal site and a **GoogleDoc** with more info <http://bit.ly/OeH5Kq>.

I use OpenSource Drupal and Google Maps API v3 and data can be downloaded in diff. formats RSS, XML, CSV, KML and MAP for other to use as showed here <http://beta.findtoilet.dk/feeds/municipality>

Imagine if ALL councils in Denmark would show/share their data as I do in my project instead of making these **GIS-maps** <http://kbhkort.kk.dk/> / **GIS-portalen.dk** <http://gisportalen.dk/> which is of NO use for the average citizen or tourist.

More **VIDEOS** <http://tinemuller.dk/findtoilet/VIDEO/> about how to use my “service”.

The future

I really hope councils/Drupal firms will work together with me/take over the project and develop further on the code - Or else I feel that all my work for **many years** <http://www.tinemuller.dk/PROJEKT/toiletter/> and my **ODIS-price kr. 100.000** <http://vimeo.com/9547341> has been wasted. :-(
