

# Easy way for Public Sector to share their data for download

Submitted on 26 Mar 2012 by Tine Müller

I use OpenSource Drupal and Google Maps API to make my project <http://findtoilet.dk/> and people can download data in RSS, XML, CSV, KML and MAP <http://beta.findtoilet.dk/feeds/municipality> and for instance use it for Apps for Smartphones or a lot of other things.

Would be great if the other EU countries would make the same. I mean for finding public toilets when one crosses the borders.

I have made this site

<https://docs.google.com/document/d/1O7uJQXbn-2DWBqv1zC7ORwIGfQ4wd-82gd-N...> where it's possible for ALL to make new toilet, update, delete and so.

Here it's data for public toilets but it could be for EVERYTHING and a easy way to share data for Public Sector.

**EDITED: 27.7.2012** I have later made this post **Share OpenData and show on Google Map - just upload a CSV file and Drupal will do it all for you**

<http://epsiplatform.eu/content/share-opendata-and-show-google-map-just-u...>
