Quick facts

-  Company: Aircheckr
-  Sector: Environment
-  Product / service: Application
-  Type of data: Open Data on air quality and crowdsourced data from local air-quality-sensors
-  Origin: Belgium

Benefits

-  Aircheckr calculates the air quality and provides real-time information, forecasting and statistics on the air quality in that area.
-  Information is clear and easy to interpret and the application also provides personal recommendations, such as 'it is perfect air for a run'.

How Open Data is used

-  Open Data is modelled and enriched with crowdsourced local sensor data and observations derived from contextual information to provide real-time information on air quality levels.

Future Plans

-  Offer real-time information on air quality using sensors and algorithms.
-  Continue giving personal recommendations based on air quality level in the area.
