## Quick facts

 Company:	Bolt (formerly Taxify)
 Sector:	Transport
 Product / service:	Website & Application
 Type of data:	Geodata
 Origin:	Estonia

## Description

Bolt offers transport services and recently also introduced food delivery services to its customers through their application. Bolt is mainly active in Madrid, Paris, London and Lisbon. Bolt also operates in African cities (notably Kenya, Nigeria and South Africa), Mexico, Australia, and Saudi-Arabia. Bolt has 30 million users in more than 150 cities globally.

## Benefits

- Bolt is the European alternative for Uber and is ready to compete in the ride sharing sector.
- Ridesharing has the potential to reduce traffic congestion and pollution in cities.

## How open data is used

Geo open data is used to connect people with available transportation (vehicle) options through the application. Geo open data offers maps of the surrounding area and widely used transportation routes in the cities. In this manner, Bolt can make sure their vehicles or deliverers are available in all highly used transportation (or food delivery) routes.
