Quick facts

- Company: HawaDawa GmbH
- Sector: Environment
- Product / service: Website
- Type of data: Air quality data
- Origin: Germany

Description

With an interactive dashboard and API, cities and companies can access high-resolution environmental data. Using this real-time data, air quality is made visible throughout the city, hotspots can be identified, and effective measures to improve air quality are proposed.

Benefits

- HawaDawa shows real-time data, enabling users to constantly observe the air quality in a selected area.
- The usage of high-quality measuring instruments, satellite measurement, external data, data analysis, joint product development, and consulting provides a new level of data quality for users.

How open data is used

Air quality is measured by a sensor network from the company itself, whose installation is commissioned and financed by the customers, satellite measurement, and further external data. Combined with machine learning and AI, the data is analysed and made accessible. As an additional service, product development, and consulting services can be commissioned by customers.
