## Quick facts

-  Company: EU Integrity Watch
-  Sector: Government & Public Sector
-  Product / service: Website & Application
-  Type of data: Governmental open data
-  Origin: Italy & France

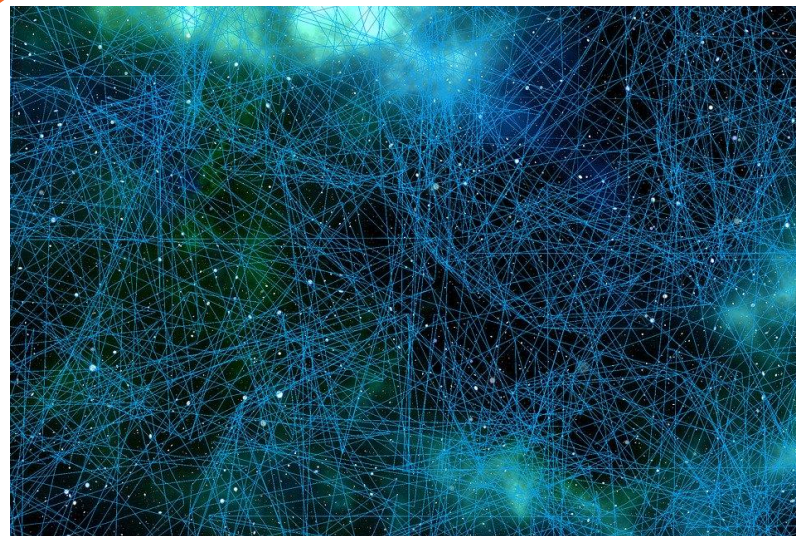

## Description

EU Integrity Watch is an online platform that enables citizens, civic society, academia and journalists to monitor the integrity of EU institutions. The upcoming application seeks to enhance the platform by integrating EU datasets on public procurement. This will enable the cross-referencing of procurement awards notices with the EU Transparency Register and an automated visual comparison of information contained in procurement notices with award notices.

## Benefits

By providing accessible data visualisation tools on EU lobbying and financial interests of the members of European Parliament (MEPs), the platform is instrumental in raising awareness of safeguards against undue influence in the EU institutions.

## How open data is used

The EU Integrity Watch mainly uses open data from the Secretariat General and the Directorate General from the Internal Market, Industry, Entrepreneurship and SMEs. The EU Integrity Watch is a finalist in the EU Datathon 2020 and competes for Challenge 3: A new push for European democracy.
