## Quick facts

-  Company: Bomenspotter
-  Sector: Environment
-  Product / service: Application
-  Type of data: Public spaces and geographical data
-  Origin: The Netherlands

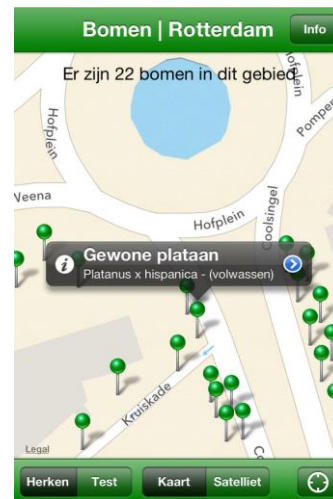

## Description

Bomenspotter allows users to share information about existing trees in specific cities, such as Amsterdam or Rotterdam. For example, if a tree no longer exists or if there are existing trees that are not yet on the map. There is also a function that enables users to learn everything about a particular tree.

## Benefits

-  Improve societal knowledge of trees – The application provides information on the type of trees and their life cycles.
-  Tree condition – The application provides information on the state of a tree, e.g., sickness / damage, via knowledge sharing.
-  Community – The application allows users to share experiences / knowledge on trees.

## How open data is used

Bomenspotter uses data of public spaces, geographical data, statistics and neighbourhoods.
