

URL <https://greenhome.nl/>**Quick facts**

 Company:	GreenHome
 Sector:	Energy
 Product / service:	Website
 Type of data:	Public data, i.a. geodata
 Origin:	Netherlands

**Description**

GreenHome is a website that offers independent advice on how to create a more sustainable house. After entering a home address on the website, users are provided with custom-made information on how they can make their home fossil-free and energy-neutral. This information includes, for example, installation costs of solar, heating, insulation and other energy-saving measures that make sense for their particular home.

Benefits

-  GreenHome integrates all necessary information home owners need to create an energy-neutral house.
-  GreenHome provides users with custom made advise in stead of general advise on energy-neutral housing.

**How open data is used**

-  GreenHome uses public available data from different sources, such as the [Dutch cadaster](#), [Google Earth](#), [Actueel Hoogtebestand](#) (up-to-date information on heights) and open data on utility usage. This data is used to train the algorithm that provides users with custom-made information on energy-neutral housing.
