Quick facts

- Company: Bitcliq
- Sector: Environment
- Product / service: Application
- Type of data: Fishing data and national data
- Origin: Portugal

Benefits

- The Big Eye's Smart Fishing Software is a new technological tool that simplifies the operational management of industrial fishing by making it more efficient, smart and sustainable.

- The software promotes transparency from when a fish is caught to when it is sold.

How open data is used

- Big Eye collects data on how many fish was caught, the fleets position where they were caught and the time taken for ships to travel.

- Data models produced by Big Eye are in compliance with organisations such as the Food and Agriculture Organisation's (FAO's) recommendations.

BIG EYE
SMART FISHING SOFTWARE

Description

- Big Eye is a real-time fleet management system that has user-friendly hardware and software covering all fishing trips, including optimized satcom and airtime communications.
