## Quick facts

 Company:	Open Energy
 Sector:	Energy
 Product / service:	Platform
 Type of data:	Energy data
 Origin:	Romania

## Description

The Open Energy project is a platform where 24 public institutions publish their electricity consumption (in kWh) on a monthly basis to make these data more transparent and enable users to monitor patterns. This facilitates the exchange of best practices, encourages energy efficiency investments, and supports responsible electricity consumption across society.

## Benefits

Through the platform, governments, citizens, and businesses have access to data that can help improve performance in terms of energy efficiency, resources, and environmental protection. This can act as a starting point to drive national efforts on responsible consumption, and encourage proactive initiatives to optimise consumption in institutions.

## How open data is used

Public institutions publish the metrics of their electricity consumption on the Open Energy platform. Visualisations of these metrics, including numbers and graphs, are open for anyone to access.
