## Quick facts

-  Company: Carto
-  Sector: Environment
-  Product / service: Website
-  Type of data: Municipal data
-  Origin: Spain

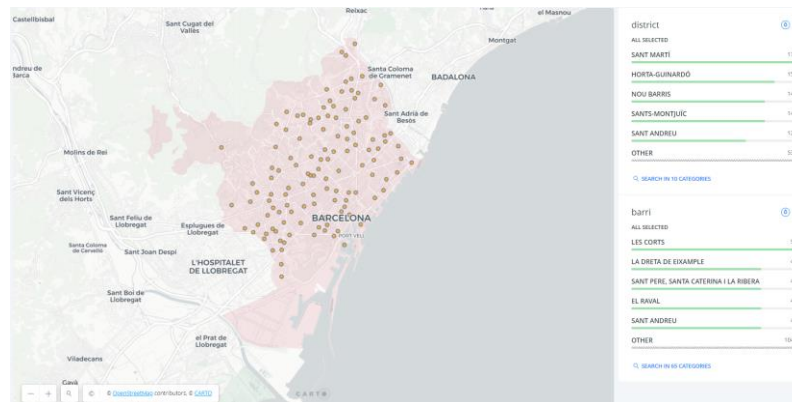

## Description

The Barcelona Waste Map is an interactive map showing the location of oil recycling bins in the city. This helps citizens to locate them, dispose of their litter at the allocated containers, and keep the city clean. The website is created with OpenStreetMap and Carto. This is one example of a private individual who has created several maps for cities in Spain, most of which visualise population data.

## Benefits

Users can search the districts of Sant Martí, Horta-Guinardó, Sants-Montjuïc, Ciutat Vella, and Eixample. Users can also filter results within their own area. The website provides access to over 60 neighbourhoods.

## How open data is used

The Barcelona Waste Map uses an open-source code to visualise the data in combination with OpenStreetMap. The dataset is provided as open data by the City of Barcelona.
