### Quick facts

|   |                      |
|---|----------------------|
|  Company:           | GIS4tech             |
|  Sector:            | Science & Technology |
|  Product / service: | Company              |
|  Type of data:      | Spatial data         |
|  Origin:            | Spain                |

### Benefits

-  Using the latest technologies for spatial analysis, GIS4tech provides added value to its clients by incorporating and processing spatial information in sectors such as Engineering or Urban Planning.

### How open data is used

-  GIS4tech analyses and integrates open data, using cutting-edge technologies such as neural networks and Artificial Intelligence (AI), Big-Data and Machine Learning.
-  They use data from public organisations in multiple formats, especially cartographies and databases from official organisations.

### Description

-  GIS4tech focuses on Geographic Information Systems (GIS). The company completes different activities such as technical assistance, advice, training, research and development. In addition, they offer various types of database analysis, such as terrain modelling, 2D and 3D cartography, remote sensing and image interpretation.
