 Sector:	Agriculture, Fisheries, Forestry & Foods
 Product / service:	Website & Application
 Type of data:	Geodata and Demographics data
 Origin:	Spain

## Description

Hispacec focuses on three key aspects in agri-food management. Namely, pre-harvest solutions such as agricultural holding, crop planning and management, supply warehouses, fertilisation plans, and field presence control; post-harvest solutions including purchases, control of manufacturing and marketing, production, sales and dispatch management, financial management, and food safety; as well as business intelligence such as models and analytics. An example is ERPagro, an agrifood business software that comprises of dozens of modules that integrate all the information about agricultural business.

## Benefits

Hispacec modernises the agricultural business model and integrates it with technology solutions.

## How open data is used

Hispacec uses models to predict changes in the market of the agriculture business. For example, Hispacec uses big data to determine efficient routes. Hispacec also determines the demand of agricultural products based on population growth numbers. Hispacec adheres to the Global Good Agricultural Practices standards.
