### Quick facts

- |   |  |
|---|--|
|  Company:           | Foundation for Nature information                |
|  Sector:            | Environment                                      |
|  Product / service: | Website  |
|  Type of data:      | Geodata, data from the NatureBank ('NatuurBank') |
|  Origin:            | The Netherlands                                  |

### Benefits

-  Waarneming collects data on flora and fauna in the Netherlands, and allows users to store and share observations online through their application 'ObsMapp'. All observations are automatically connected to the current time and the GPS-location.
-  The website provides an excursion planner with an optimal route and an option to follow an animal through the excursion.

### How Open Data is used

-  Open Data is used to create maps for the excursion planner application.
-  Data from the Dutch NatureBank on Dutch flora and fauna is used to provide information on various species in the country.

### Future Plans

-  Continue to provide information about various aspects of nature and wildlife in the Netherlands.
