Quick facts

- Company: PathCheck
- Sector: Science & Technology, Health
- Product / service: Platform
- Type of data: Health data
- Origin: United States

Description

PathCheck is a public health platform designed to offer a digital solution in response to the global COVID-19 pandemic, specifically for governments, states, and countries. Its main aim is to contain the spread via technology services, such that communities can quickly and safely be re-opened. The platform make it possible to receive exposure notifications, trace points of contact through smartphones across the globe, collect epidemiological information and facilitate communication between citizens.

Benefits

PathCheck offers a customisable app for each jurisdictions' specific characteristics and functions as a think tank for sharing knowledge and building standard in response to COVID-19. It allows users to rebuild the economy, without giving up their privacy.

How open data is used

The platform hosts a number of solutions and publishes the underlying data and code used for these solutions on the GitHub, making it accessible and transparent for anyone.
