Quick facts

 Company:	Air & Space Evidence Ltd
 Sector:	Justice, Legal System & Public Safe
 Product / service:	Service
 Type of data:	Satellite data
 Origin:	United Kingdom

Description

Air & Space Evidence provides three core services by using satellite data – evidential investigations, waste crime, and asset & property management. In evidential investigations they help to find relevant Earth observation (EO) data for the investigation and interpret them. In terms of addressing waste crime, Air & Space Evidence has the ability to detect illegal sites and track waste. With the asset & property management, clients can make better decisions on investments and check the status of their assets.

Benefits

Earth observation data provides additional information to improve evidential investigations and to counter waste crime.

How open data is used

Air & Space Evidence captures, manages, and analyses large data sets from a wide range of satellite sensors. Through professional interpretation of what an image actually shows, its significance in the context of an investigation and an assessment of the accuracy of the information can be provided.
