### Quick facts

 Company:	Curio
 Sector:	Environment
 Product / service:	Application
 Type of data:	Tree data
 Origin:	United Kingdom

### Description

Curio provides a means for organisations to truly engage with local communities around the importance of trees as a public amenity that benefit us all.

### Benefits

-  Knowledge sharing – Curio allows users to share knowledge and experience with local communities and stakeholders.
-  Environmentally community – The application enables users to learn about their natural environment and to participate in interactive classrooms.
-  Storytelling – Curio allows users to add photos and notes to tell the story of the environment of specific areas.

### How open data is used

Curio uses tree data released by the Greater London Authority (GLA). The data is derived from the local authorities who maintain their own data collection and management regimes, the data is provided to the GLA in a manner that makes it relatively easy to deal with by including standardised English species names, GPS locations and so on.
