Quick facts

- Company: OpenSensors
- Sector: Economy & Finance
- Product / service: Platform
- Type of data: Operational data
- Origin: United Kingdom

Benefits

- OpenSensors is a messaging engine that can process millions of messages per second from any internet-connected device.
- The software has a wide range of uses from automating car parks through license plate recognition and motion sensors to optimising office spaces via thermostats, lights and locks.
- Data generated is made available for re-use, free of charge.

How open data is used

- OpenSensors collects data from sensors in a client's office to analyse and provide recommendations to improve efficiency.
- Generated data is made available for re-use.

Description

- OpenSensors software aims to reduce lease expenses by cutting costs, planning capacity and managing competing demands to increase efficiency and optimise the workplace.
