Quick facts

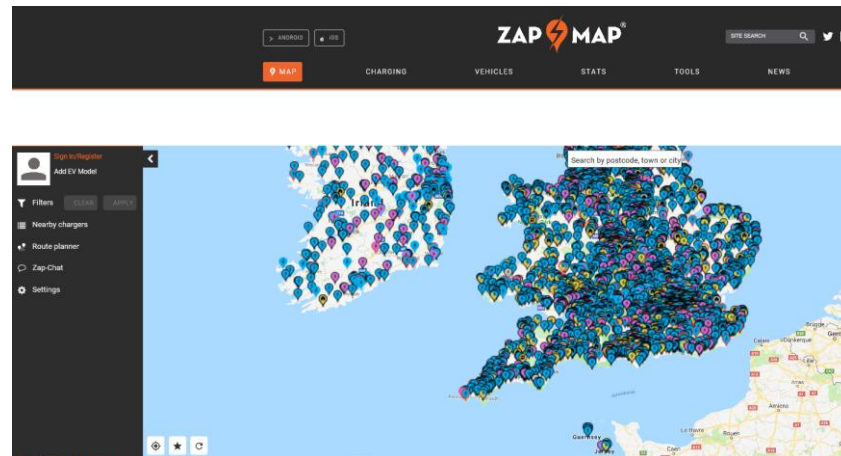

-  Company: ZapMap
-  Sector: Science & Technology
-  Product / service: Application & Platform
-  Type of data: Open national data & transport provider
-  Origin: United Kingdom 

Description

ZapMap shows all charging stations across the United Kingdom (UK) and the Republic of Ireland. Users can locate and navigate to the different charging stations and visualise them on a list or map view. In addition, users can filter their results based on charge point type (i.e. slow, fast, rapid AC, and rapid DC), connectors, location type, payment, and access type. They can also limit their search to only see available charging stations.

Benefits

Zapmap provides users with an overview on all charging station options and locations in the UK and the Republic of Ireland. 

How open data is used

-  Zapmap uses multiple sources for data, including the National Charge Point Registry (NCR) and Open Charge Map.
-  The service is in partnership with charge point operators across the UK and the Republic of Ireland, such as Transport for London.
-  Furthermore, the platform is open for private charging stations that users can upload to the network.
