

URL <https://lexagene.com/>**Quick facts**

-  Company: LexaGene
-  Sector: Health and Science & Technology
-  Product / service: Company
-  Type of data: Pathogen data
-  Origin: United States of America

**Description**

LexaGene is a biotechnology company developing a fully automated open-access pathogen detection platform. The technology aims to transform the way organisations prevent and diagnose diseases in different markets, such as food safety, water quality monitoring and aquaculture pathogen surveillance.

Benefits

-  LexaGene's pathogen detection platform is easy to use and provides accurate pathogen (a bacterium, virus or other micro-organism that can cause disease) detection.

**How open data is used**

-  LexaGene collects samples of different pathogens and uses the data to support their fully automated pathogen detection platform.
