## Quick facts

-  Company: MIT Media Lab
-  Sector: Agriculture, Fisheries, Forestry & Food
-  Product / service: Platform
-  Type of data: Data on agricultural technologies
-  Origin: United States of America

## Description

The MIT Media Lab Open Agriculture Initiative (OpenAg) is a platform that fosters the creation of an open-source ecosystem of technologies, bringing together partners from industry, government, and academia to create collaborative tools and communities.

## Benefits

-  The Open Agriculture Initiative aims to encourage the further development of a sustainable food system.
-  With an open-source ecosystem of technologies transparency, networked experimentation, education, and hyper-local production are enabled.

## How open data is used

As an open-source project, the Open Agriculture Initiative (OpenAg) relies on the co-creation of collaborative tools and open technology platforms. In this, the input is provided by partners from industry, academia, and government which are organised in a research collective.
