

URL opendata.yurukov.net/elections

Quick facts

-  Company: Bojan Jurukov
-  Sector: Government & Public sector
-  Product / service: Service
-  Type of data: Voting results
-  Origin: Bulgaria

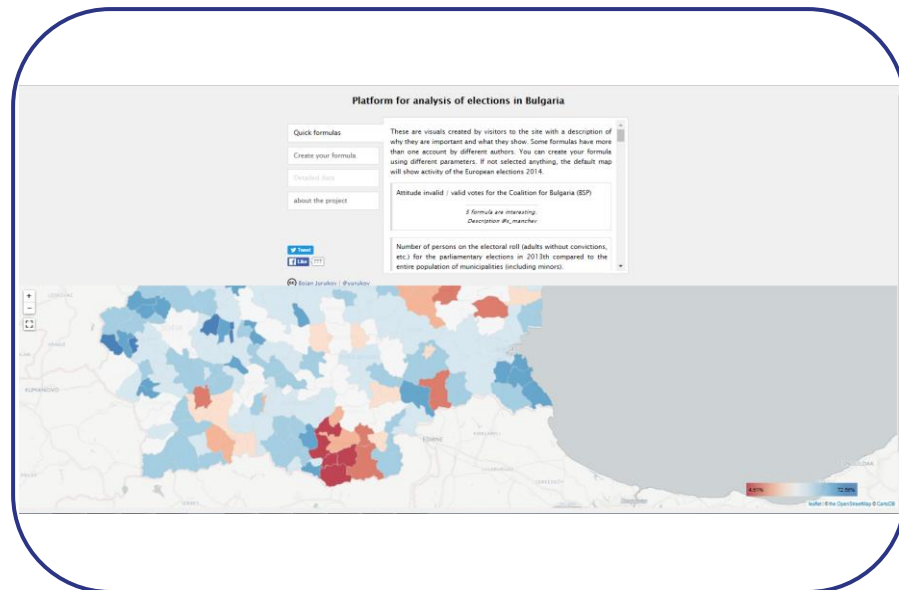

Benefits

-  The Platform for analysis of elections in Bulgaria visualizes the outcomes of elections in Bulgaria up until the municipality level and provides formulas to check these votes on multiple parameters.

How Open Data is used

-  The entire service is based on the use of Open Data provided by the government.

Other information

-  The website not only displays the electoral patterns but also combines this with information about the municipalities such as the development of their debt or importance of tourism.
