Quick facts

- Company: CABI
- Sector: Other
- Product / service: Plant clinics
- Type of data: Plant, disease and pesticide data
- Origin: Global

Benefits

- The aim of Plantwise is to increase food security and improve rural livelihoods by reducing crop losses by the establishment and support of a network of *Plantclinics*, where farmers receive crop management recommendations.

How Open Data is used

- In order to support plant doctors in making the right diagnoses and recommendations, the programme created a global knowledge resource for plant health information called the Plantwise Knowledge Bank. This database combines global and local open access data, providing sufficient information for the experts to turn questions into answers.

**1,800
plant clinics**

We've helped establish thousands of plant clinics in 34 countries

**4,500,000
farmers**

We've reached millions of smallholder farmers and their families

**5,000
plant doctors**

We've trained thousands of experts to advise farmers

Other information

- To facilitate a low barrier access to the Plantwise Knowledge Bank for experts all over the world, the database can also be accessed by tablet through a mobile application. Another application is available for experts to brush up their plant health diagnostic skills.
