

## Smart Parking Systems Company:

Sector:

Product / service: ø

Type of data:

Origin: ø

Application **Geospatial & Parking** 

Transportation

Italy

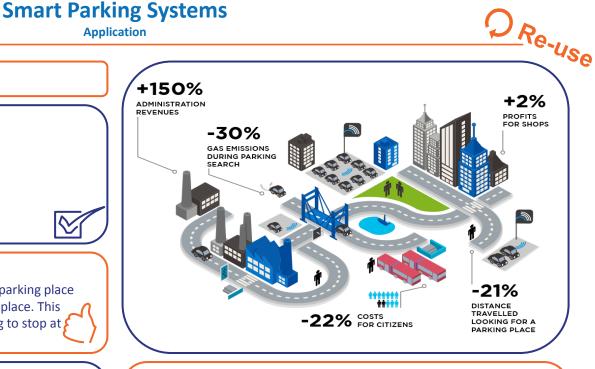

## **Benefits**

The application guides users to the nearest available parking place and provides a direct payment channel for the found place. This saves both the driver in looking for a place and having to stop at a payment terminal.

## How Open Data is used

The application combines multiple data sources to provide the 1 information and services to its users. By combining existing (Open) Data with new data from for example sensors, the management of street parking places is made more efficient. This creates bigger revenues for the government and lower costs for citizens.

## **Other information**

In order to get the information on parking availability, the company 0 has developed its own wireless underground sensor.
