Quick facts

- Company: Plant a Tree
- Sector: Public
- Product / service: Application
- Type of data: geospatial
- Origin: Poland

Benefits

- The city of Gdansk has launched a web application allowing its inhabitants to pinpoint the best locations for planting new trees.
- It increases the participation of citizens and supports a more sustainable and eco-friendly development of the city.

How Open Data is used

- The application integrates Google Maps layer with data imported real-time from the city's Geographic Information Systems. It helps determine automatically the owner of a plot.

Other information

- The users of the application do not pay for any planted tree.
- Open access to data collected by the city hall is an important part of Gdansk's openness strategy.
